IOS & ANDROID APP · CONCEPT

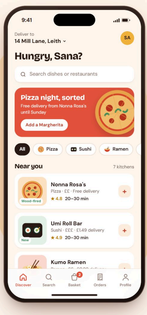

Forkful.

Dinner from the restaurants on your street, not a warehouse kitchen.

Forkful connects hungry neighbours with independent kitchens within three miles. Restaurants keep more of every order, couriers are paid per mile, and you see exactly where your food is, from the pass to your front door.

SCREENS

Four screens that do the heavy lifting.

Most orders touch the same four moments: choosing, customising, paying and waiting. We spent the most design time here.

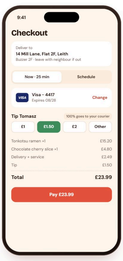

Restaurant menu

Photos are optional for kitchens, so every dish gets a clear name, price and dietary tag instead.

Item options

Required choices sit first and price changes show inline, so nobody gets surprised at checkout.

Checkout

One screen, no upsell pop-ups. Fees are itemised and the tip goes straight to the courier.

Live tracking

Real courier position every five seconds and an arrival time, not a vague "soon".

KEY FEATURES

Built for the people who cook, carry and eat.

Three-mile radius

Only kitchens close enough to arrive hot. No dark kitchens, no virtual brands hiding behind one address.

12% flat commission

Restaurants see the fee on every order in their dashboard. Couriers earn per mile, plus 100% of tips.

Live courier map

Position refreshes every five seconds once your order leaves the pass, with a timed ETA you can trust.

Dietary filters that stick

Set halal, vegan or nut-free once. Menus hide what you can't eat and flag anything uncertain.

Talk to the kitchen

Leave a note per dish. Kitchens can reply if they need to swap an ingredient, before they start cooking.

Reorder in two taps

Your usual Friday order sits on Discover, with today's price and wait time already worked out.

DESIGN NOTES

Warm enough to make you hungry, plain enough to order fast.

8pt grid, 16–22px radii, 44px minimum tap targets. Food is drawn as flat illustrations so kitchens without photos never look second-rate.

USER FLOW

From craving to doorstep.

The happy path takes about 70 seconds and five screens. Each step was tested with 14 regular delivery customers in Edinburgh.

01 Open & browse
Discover opens on kitchens near your saved address, sorted by how soon food can arrive.

02 Pick a dish
Filter by cuisine or search a craving. Dietary settings already hide what doesn't fit.

03 Make it yours
Choose broth, extras and notes. The price updates before you tap add.

04 Pay once
Apple Pay, Google Pay or a saved card. Fees and tip are shown line by line.

05 Watch it arrive
Kitchen status, then the courier on the map, then a nudge when they're at your door.

RATINGS

Neighbours, kitchens and couriers like it.

4.8 ★★★★★
from 2,140 ratings in the pilot

> "The map actually matches where the rider is. I stopped pacing by the window."
>
> **Imogen R.**
> Customer, Leith

> "Twelve percent means we can price a curry the same in-house and on delivery. That was the deal-breaker on other apps."
>
> **Harpreet S.**
> Owner, Lal Qila Kitchen

> "Pay per mile and short drops. I do more runs in an evening than I used to on the big platforms."
>
> **Tomasz K.**
> Courier, Forkful Leith

Hungry? Your street is already on Forkful.

Live in Leith, Stockbridge and Morningside. More Edinburgh postcodes every month.
